Space is the geometric region occupied by bodies whose positions are described by linear and angular measurements relative to a coordinate system. and they should be understood at the outset. Basic Concepts: The following concepts and definitions are basic to the study of mechanics. Welcome! This is one of over 2,200 courses on OCW. Find materials for this course in the pages linked along the left. MIT OpenCourseWare is a free & open publication of material from thousands of MIT courses, covering the entire MIT curriculum.. No enrollment or registration. Sat, 10 Nov 2018 19:45:00

GMT Lecture Notes | Dynamics | Mechanical Engineering | MIT ... - Note that for circular motion $v \cdot r = 0$ since $e \cdot e = r = 0$: $v = j\dot{\theta}r = j\dot{\theta}r$ $j = j\dot{\theta}r$: Hence for constant speed $\dot{\theta} = \omega$ with ω constant (choose $\omega > 0$.) $v = \omega r$ hence $a = -\omega^2 r$: Since ω is constant then $\dot{\omega} = 0$; so $a = -\omega^2 r$: Hence $a = -\omega^2 r$: The acceleration is directed radially inwards. This is called centripetal (centre-seeking) acceleration. Dynamics - Dur - This is a statics and dynamics text for second or third year engineering students with an emphasis on vectors, free body diagrams, the basic momentum balance principles, and the utility of computation.
